The formation of the rischorrites and fine-grained-aegirite-hornblende nepheline-syenites in the Khibiny alkalic massif, as a single geological body, occurred after the crystallization of the foyaites, as the result of a single intrusive movement by a particular portion of the molten magma. The genetic connexion between the aegirite-hornblende nepheline-syenites and the rischorrites is established, on the following grounds: (a) the gradual grading of the former into the latter; (b) the optical orientation of the potash feldspar, which is of the same type in both rocks; (c) the presence of the (Earth Sciences--Geology, TT, v. 5, no. 7) (over)

LETTER TO THE EDITOR (Pis'mo v Redaktsiyu).
June 61 [4]p. RTS 1804.
Order from OTS or SLA $1.10 61-23642

Trans. of Radiotekhnika (USSR) 1954, v. 9, no. 6, p. 81-83.

DESCRIPTORS: Electrical engineering, Electronics, *Electromagnetism, Electrical fields, Magnetic fields, *Electromagnetic fields, Measurement.

It is suggested that the new expressions for the electromagnetic field equations and the new absolute system of units proposed by I. G. Klyatskin (Radiotekhnika 9: 3-10, 1954; available in translation from OTS or SLA $1.10 as 61-19904) should be unified under the name "MKSAc System" because the adjective "universal" can be applied to the formulation of the electromagnetic field equations.
